

NGS MANAGER[®]

SEQUENCING WORKFLOW MANAGEMENT

Streamlined run monitoring
Optimized data management

NGS Manager®

NGS Manager® is a software designed to monitor sequencing workflows.

It provides a unified interface to visualize every step of your process, from sample origin to final analysis across a wide range of industry-standard devices and technologies.

TARGET AUDIENCES

Our solution is tailored for laboratories running sequencing platforms that primarily utilize the following technologies:

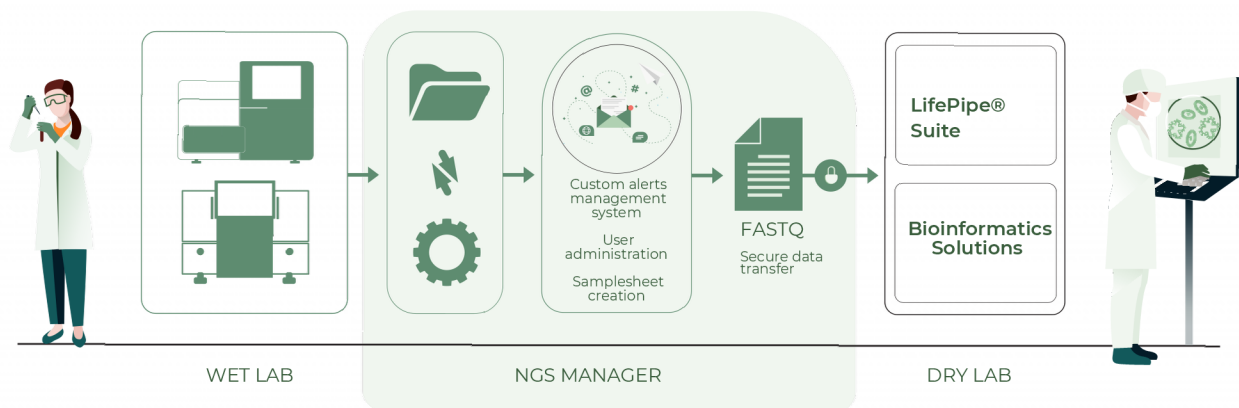

LIMITS OF CURRENT SOLUTIONS

- Errors cannot be detected before the end of the sequencing run.
24 to 48 hours
- No real-time overview of active laboratory operations.
Siloed software with no interoperability
- Inability to centralize directory and file management.
Fragmented technologies and disparate file formats

NGS MANAGER®

TOP FEATURES

Our solution enables biologists to monitor and manage platform activity and active runs directly from their screen regardless of the size, brand, or complexity of their sequencing instrument fleet.

EVENTS & ERROR REPORTS

- New run
- Sequencing
- FASTQ
- Run completed
- Samplesheet
- Post process
